SIO Sliding Parking.
Mobile partition wall with suspended sliding panels for Interior and Exterior Applications.

SIO Sliding Parking is a mobile partition wall with suspended sliding panels, suitable for both, Interior and Exterior applications.
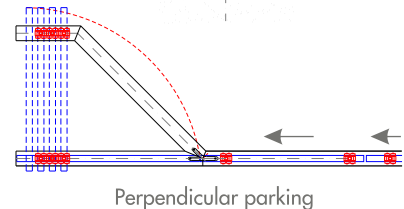

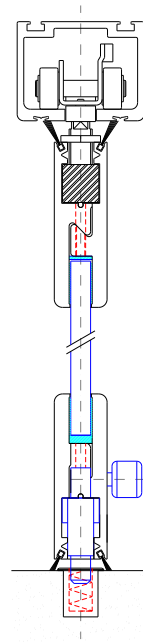

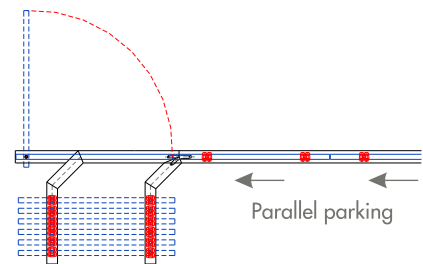

The system does not require floor guiding and the partition panels can be individually maneuvered by hand into a conveniently sited stacking arrangement to open up the entire width of the partition. The stacking arrangement can be situated to either allow panels to be stacked out of clear sight or in an area where there is no hindrance to access. The first panel is an openable door after which all other panels can slide and stack into the parking area.

SPECIAL FEATURES:

- SIO Sliding Parking use 12mm thick tempered glass mounted into top and bottom extruded Alumunium profiles.

- Profiles are normally available in natural anodized Aluminium finish.

- Maximum panel size is 1400 mm X 4000 mm with no limit to the number of sliding panels.

Parallel parking

Perpendicular parking

SIO Sliding Parking is also available for creating heavy duty sliding wooden partitions. Separate hanger brackets for wooden panels are used along with the top track profile and parking area components. Panels of weights upto 250 kg are possible.
